- After creating an account on the website, you must retrieve your Public Key, log in to GitLab, and add the Public Key to your account.
- All CodeRunner-compatible projects must contain files .run and .build. These files are shell scripts executed with the "run" and "build" commands, respectively.
- When using CodeRunner (either crconsole or the web interface):
  - You must be logged in (to the shell server or web interface) as the same user which owns the GitLab repository.
  - The "Project" is the name of the GitLab repository.
  - The "Runner" is either "runner1" or "runner2".
  - To deploy the project git.teamN.isucdc.com/cdc/helloworld with crconsole:
    - ~> deploy :helloworld => :runner1
  - Using the web interface:
    - Fill in "helloworld" (no quotes) for project, and "runner1" for runner
    - Press "Deploy"
